

Saving Pure Seed

Printable Survival Series by Three Wondrous Acres Homestead

SAVING SEEDS IS A COMMON PRACTICE, WHETHER BY A NOVICE CONTAINER GARDENER IN A HIGH RISE APARTMENT BUILDING OR BY AN EXTREME PREPPER. SAVING PURE SEED IS IMPORTANT BECAUSE:

- ⦿ It produces plants that are identical to the parent plant
- ⦿ It stabilizes a hybrid
- ⦿ It prevents the gardener from saving potentially useless seed
- ⦿ It helps the individual to save the healthiest genetics in the garden
- ⦿ Homesteaders can quickly learn how to save enough seed to keep their families fed and happy during hard times, as long as they are using techniques to save pure seed and properly store it
- ⦿ It makes a seed stash valuable for trading, whereas seed saved from potentially cross-pollinated flowers is not as valuable unless there is a shortage of seed
